No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 10, P

Sequence 240, Application US/10473126

Publication No. US20040234973A1

GENERAL INFORMATION:

APPLICANT: Epigenomics AG

TITLE OF INVENTION: Methods and nucleic acids for the analysis of hematopoietic cell

TITLE OF INVENTION: proliferative disorders

TITLE OF INVENTION: proliferative disorders

TITLE OF INVENTION: DATE: 2003-09-26

CURRENT APPLICATION NUMBER: US/10/473,126

NUMBER OF SEQ ID NOS: 1258

- Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain v2; on bw sp, the same strain used for the BDGP's pl' and BST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.
                                                                                                                                                                                                                                                                                                                                                                            Drosophila melanogaster genome survey sequence TET3 end of BAC #BACR28W18 of RPCI-98 library from Drosophila melanogaster (fruit fly), genomic survey sequence.

- Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscogawa and Aaron Mammoscar in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-99 and was constructed by partial EcoRi digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be located of the library found at http://bacpac.med.buffalo.edu/drosophila_bac.htm.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Submitted (02-UNN-1999) Genoscope - Centre National de Sequencage : Submitted (02-UNN-1999) Genoscope - Centre National de Sequencage : PRANCE (E-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr |
Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Oscegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buiffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digetion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pl and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be location/Qualifiers

CNSO167M 1201 bp DNA linear GSS 26-JUL-1999
Drosophila melanogaster genome survey sequence T7 end of BAC
BACN15M24 of DrosBAC library from Drosophila melanogaster (fruit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Submitted (23-JUL-1999) Genoscope - Centre National de Sequencage : BP 191 91006 EVRY cedex - FRANCE (B-mail : seqref@genoscope.cns.fr - Web : www.genoscope.cns.fr)

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk -. This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector

Determination of this BAC-end sequence was carried out as part of collaboration with the Berkeley Drosophila Genome Project (BDGP).

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter do Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is anamed RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's PI and EST libraries. A more detailed description of the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://wagac.med.buffalo.edu/drosophila_bac.htm.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

cc activated receptor gamma (PPAR-gamma) gene. The nucleic acids are useful CC for screening for agents capable of modulating the expression of a human PPAR-gamma gene (modulators) form pharmaceutical compositions that are useful for treating diseases associated with high/low levels of human PPAR-gamma gene expression. The diseases include high/low levels of human PPAR-gamma gene expression. The diseases include cobesity, anorexia, cachexia, lipodystrophy, lipomas, lipoasrcomas, abnormalities associated with anti-human immunodeficiency virus (HIV) treatment, insulin resistance, non-insulin-dependent diabetes mellitus composition overy syndrome, diseases of the gastrointestinal (GI) tract, inflammatory bowel disease, Crohn's disease, ulcerative colitis and bowel cancer. The nucleic acids are useful for studying the role of the PPAR-gamma enables genetic studies of PPAR-gamma male genetic studies of PPAR-gamma male genetic studies of PPAR-gamma enables genetic studies of PPAR-gamma matations in humans, and diseases associated with altered adipose tissue function, like and diseases associated with altered adipose tissue function, like obesity and lipodystrophic syndromes. The nucleic acids consein and assays. The control regions of the nucleic acids consolise acreening assays. The control regions of the nucleic acids consolise acreening descreening disorders or diseases associated with the level of PPAR-gamma-lip proximal promoter, exon Al and intron Al expresents human PPAR-gamma-lip proximal promoter, exon Al and intron Al
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

The invention comprises amino acid and coding sequences containing genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention. The DNA and protein sequences of the invention are useful for diagnosing and treating autoimmune disease, such as: rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, pernicious anneamia, asthma, vitiligo, glomerulonephritis, Grave's disease, myocarditis, Sjogran's disease, or primary systemic vasculitis. The present nucleic acid represents a human autoimmune disease-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             7080
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9

                                                                                                                                                                                 genetic polymorphisms associated with an altered risk of developing an autoimmune disease (e.g. rheumatoid arthritis). The invention further comprises a method of identifying an individual that has an altered risk of developing an autoimmune disease, comprising detecting a single nucleotide polymorphism (SNP) in a nucleic acid of the invention. The DNA and protein sequences of the invention act useful for disposing and treating autoimmune diseases, such as: rheumatoid arthritis, type 1 diabetes, multiple sclerosis, systemic lupus erythematosus, inflammatory bowel diseases, poriasis, tyroniditis, cellac disease, pernicious ansemia, asthma, vitiligo, glomerulonephritis, Grave's disease, myocarditis, Sjogren's disease, or primary systemic vasculitis. The present nucleic acid respresents a human autoimmune disease related genomic DNA sequence of the invention. NOTE: The present sequence is not shown in the specification, but has been retrieved from the NIPO website.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9

The present into present in solutions and isolated, pointing of comprising a control region of a human peroxisome proliferator activated receptor gamma (PPRR-gamma) gene. The nucleic acids are useful for scenning for agents (modulators) form pharmaceutical compositions that are useful for treating diseases associated with high/low levels of human PPAR-gamma gene expression. The diseases include obesity, anorexia, cachexia, lipodystrophy, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, lipomas, li
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         invention describes an isolated, purified or enriched nucleic

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ò
                                                                                                                                                                                                                                                                                                                 The present invention relates to a new test kit comprising marker DNA, for cattle or derived meat products, which has any of the sequences shown in AB220937-AB220970, all of which contain at least one variable position (single nucleotide polymorphism, SNP), and these SNPs are tabulated. The kit is used in animal production or breeding, and to track cattle-derived foods, e.g. for consumer protection. The specified sequences contain sufficient SNPs, present at various frequencies in the cattle population, to provide, in combination, a genetic fingerprint for individual animals. The variable positions can be queried by high-throughpur methods, making possible typing of the entire cattle population in the form of a digital DNA signature. The present sequence is a bovine marker DNA for use in the

The invention relates to 17880 cotton expressed sequence tags (ESTS);
ACM45220-ACM5099). The ESTS were isolated from cDNA libraries generated
from primed or non-primed seeds from variety DP50B, mature seeds from
C variety Coker 312 Boswell 36 Field, and androcedium tissue, gynoecium
C tissue, developing fibres, carpel walls and septa from variety
C buccton33B. The invention also relates to substantially purified
CC proteins or their fragments encoded by nucleic acid molecules of the
invention, and to transformed plants having a nucleic acid construct
C comprising a nucleic acid of the invention. The cotton ESTS are useful
C invention, and to transformed plants having a nucleic acid construct
C comprising a nucleic acid of the invention. The cotton ESTS are useful
C comprising a nucleic acid of the invention. The cotton ESTS are useful
C comprising a nucleic acid of the invention. The cotton ESTS are useful
C comprising a nucleic acid of the invention. The cotton ESTS are useful
C cused for isolating a variety of agronomically significant genes
C members of a particular gene family. The nucleic acid molecules may be
C used for isolating a variety of agronomically significant genes
C also useful for identifying genes important in intriating and maintaining
C seed germination or that may be used to mitigate stresses encountered
C during seed germination. The ESTS additionally enable the acquisition of
C during seed germination. The ESTS additionally enable the acquisition of
C componentially significant genes in these tissues are further useful for
C schemes, genetic and molecular mapping, and in cloning of agronomically
C significant genes. The nucleic acid molecular markers useful for a
C detecting the expression level or pattern of a protein or mRNA and for
C detecting the expression level or pattern of a protein or wall for detecting the value priminal and sequence represents a specifically claimed EST isolated from a
C cotton variety Nuccetton31B enderseles and in cloimed EST isolated from a parent is the pri
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                specification, but was obtained in electronic format directly from the US patent office at segdata.uspto.gov/sequence.html?DocID=US20040123340
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 86
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New isolated nucleic acid molecule that encodes a plant protein or its fragment, useful for isolating a variety of agronomically significant genes associated with plant growth, quality or yield, and as molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1 coccreccoraccocyreccocaccoccaccoccaccoccaccoccagocagocago

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             expressed in normal ovary tissue. Artificial diremosomes and cosmid clones containing the sequences can be used as gene transfer vehicles. The sequences can be used to produce DNA fragments containing full-length genes. Host cells transformed with the sequences can be used to produce polypeptides or polypeptide fragments, which can be used to screen phage displays for polypeptides that bind to them, or as tools for identifying agents active against ovarian cancer, or to prepare medicaments for treating ovarian cancer. The cDNA sequences can be used to obtain genomic sense, their promoters enhancers, allencers, exon structures, intron structures and their splice variants. AAA4122-Z4124 represent cDNA sequences derived from normal human ovarian tissue and which encode the

The invention relates to an isolated nucleic acid molecule (I) comprising a mucleotide sequence given in Tables 1-9 (ABV0010-ABV62213) of the specification or its complement. (I) is useful for: (a) assessing whether a patient is afflicted with prostate cancer; (b) monitoring the progression of prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibit prostate cancer in a patient; (d) assessing the efficacy of a therapy for inhibiting prostate cancer in a patient; (e) selecting a composition for inhibiting prostate cancer in a patient; (f) assessing the prostate cell carcinogenic potential of a compound; (g) determining whether prostate cancer has metastasized in a patient; (h) assessing the aggressiveness or indolence of prostate cancer in a patient; (l) is also useful as a pharmacodyanamic or pharmacogenomic marker
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cotton; plant; BST; expressed sequence tag; transgenic plant; androecium; variety Nucotton338; library LIB3828; molecular tag; molecular marker; genetic mapping; molecular mapping; seed germination; plant growth; plant quality; plant yield; plant breeding; tissue printing; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                84
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                25 céceccécececécececacececécececentaria a consecente de consecente de consecente de consecente de consecente de consecente de consecente de consecente de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consecuta de consec

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to 17880 cotton expressed sequence tags (ESTB;
ACN45220-ACN63099). The ESTB were isolated from cDNA libraries generated
from primed or non-primed seeds from variety DPSDB, mature seeds from
variety Coker 312 Boswell 96 Field, and androecium tissue, gynoecium
tissue, developing fibres, carpel walls and septa from variety
Nucotton33B. The invention also relates to substantially purified
proteins or their fragments encoded by nucleic acid molecules of the
invention, and to transformed plants having a nucleic acid construct
comparising a nucleic acid of the invention. The cotton ESTB are useful as
molecular tags to isolate genetic regions, to isolate genes are
members of a particular gene family. The nucleic acid molecules may be
used for isolating a variety of agronomically significant genes are
associated with plant growth, quality, yield, and could also serve as
links in metabolic and catabolic pathways. The nucleic acid molecules are
also useful for identifying genes important in initiating and maintaining
seed germination. The ESTS additionally enable the acquisition of
promorers and cis-regulatory elements which will be useful to express
also permits the acquisition of molecules are further useful for
also permits the acquisition of molecules are further useful for
detecting the expression level or pattern of a protein or makes
chemes, genetic and molecular mapping, and in cloning of agronomically
significant genes. The nucleic acid molecules are further useful for
detecting the expression level or pattern of a protein or makes
cotton variety Nucleorian appoing, and in cloning of agronomically
sequence data for this patent did not form part of the printed
sequence data for this patent did not form part of the printed
sequence data for this patent did not form part of the brinted
specification, but was obtained in electronic format directly from the US
patent office at sequate or patents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 187 ececrácica ecacado e en caracidade en 128

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and sarcoma-upregulated bNA of the invention. The current sequence is not a human soft tissue sarcoma-upregulated bNA of the invention. The current sequence is not shown within the specification per se but was submitted in CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               soft tissue sarcoma; cytostatic; gene therapy; vaccine; screening; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 GCCCGCCCCCCCCGCCCCGGCCCCGACCCGGTTCCGCCGCGGCGCAGCGGGGCC 120

The proteins have antibacterial and antiinflammatory activity. (1), nucleic acids encoding (1), ABN66044-ABN71526 and antibodies that bind (1) are used in the manufacture of medicaments for the treatment or prevention of infection or disease caused by Streptococcus bacteria, particularly S. agalactiae and S. pyrogenes. biological sample. (1) is used to detect Streptococcus in a biological sample. (1) is used to detecnime whether a compound binds to used as a vaccine or diagnostic composition. The disease caused by Streptococcus that is prevented or treated may be maningitis. Nucleic acid encoding (1) may be used to recombinantly produce (1) and may be used in gene therapy. Antibodies to (1) are used for affinity
                                                                                                                                                                                                                                                                                             New Streptococcus protein for the treatment or prevention of infection or disease caused by Streptococcus bacteria, such as meningitis, and for detecting a compound that binds to the protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

triphosphate-binding protein coupled receptor (GPCR). A polymucleotide of the invention may have a use in gene therapy. The polymucleotide and polypeptide are useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor. The polymucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotide, useful for preparing a composition for treating a patient in need of increased or suppressed activity or expression of the guanosine triphosphate-binding protein coupled receptor.

The invention relates to human polynucleotides (AAI79941-AAI93841) and the encoded proteins (AAO00010-AAO13910) that exhibit activity elating to cytokine, call proliferation or call differentiation or which may induce production of other cytokines in other call populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem call growth factor activity, immunomodulatory activity and activity, tissue growth factor activity, immunomodulatory activity and activin/inhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and inflammation. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                         Isolated nucleic acids and polypeptides, useful for preventing diagnosing and treating e.g. leukemia, inflammation and immune disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Cotton; plant; EST; expressed sequence tag; transgenic plant; gynoecium; variety Nucotton338; library LIB3829; molecular tag; molecular marker; genetic mapping; molecular mapping; seed germination; plant growth; plant quality; plant yield; plant breeding; tissue printing; ss.

                                                                                                                                                                                                                                                                                                                                                                           The invention describes an animal cell which has defective or lack of expression of beta-catenin and/or plakoglobin. The cell is useful for research purposes. The beta-catenin defective cell, plakoglobin defective cell or the beta-catenin and plakoglobin defective animal cells are useful for studying the function and regulation mechanism beta-catenin and/or plakoglobin, for analysing the diseases, disorders or conditions resulting from the variation/mutation of the proteins, developing therapeutic agents and improving treatment methods. The cells are useful for (a) elucidating signal transduction mechanism for cell ablesion through beta-catenin and plakoglobin, (c) elucidating signal transduction mechanism cross-reactivity of cadherin and desmosome cadherin, (d) elucidating function cells cates extendin in what signal transduction, (e) elucidating signal transduction of plakoglobin. The cells enable effective analysis of the transduction of plakoglobin. The cells enable effective analysis of the beta-catenin and plakoglobin. The sequence represents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New animal cell defective in or lacking expression of beta-catenin or plakoglobin, is useful for studying the function and regulation mechanism beta-catenin and/or plakoglobin, and in developing therapeutic agents.
